**Snap-Set Compression Packer****DESCRIPTION:**

The 'ETI-AR1' Snap-Set Compression Packer, and 'ETI-AR1' Snap-Set Compression Packer with Holddown, are retrievable set down packers featuring a by-pass area through the packer and integral unloader.

APPLICATIONS:

The 'ETI-AR1' is used as the upper packer in a single string two-packer installation for zone isolation, injection, or production. They are used above either drillable production or retrievable compression packers.

FEATURES:

- Reliable three element packing system.
- No tubing rotation is required. Slack-off weight against a lower packer to set, straight pick-up to release.
- A collet snap-latch prevents the packer from setting before landing the seal assembly or setting a lower retrievable packer. The lower portion of the tool is rotationally locked in order to torque in either direction through the packer.
- Equivalent to and parts interchangeable with Baker Product Numbers 636-31 and 635-31.

AVAILABILITY:
