**Sliding Sleeve**

Model 'ETI-L'

DESCRIPTION:

The 'ETI-L' Sliding Sleeve is a downhole flow control device mounted in the production tubing. It effectively controls flow between the tubing and casing annulus by means of an internal sleeve that is operated by a Model 'D-2' shifting tool. The 'ETI-L' Sliding Sleeve is shifted up to open, down to close.

APPLICATIONS:

The 'ETI-L' Sliding Sleeve is used for selective production, testing and treating of individual zones in a multi-zone selective well or producing more than one zone through a single tubing string. The 'ETI-L' is also used to displace the tubing or annulus fluid after the valve tree is installed, circulating inhibitors for corrosion control or killing a well by circulation. A blanking plug or separation sleeve can be landed in the nipple profile to shut-in well or when testing tubing.

FEATURES:

- Simple, positive control. The 'ETI-L' Sliding Sleeve makes it possible to close the ports without leaving any obstruction in the tubing once the shifting operation is completed.
- Protected Closing Sleeve. The closing sleeve is recessed so that there is no danger of opening or closing the sleeve by mistake.
- Additional seating nipple. The upper sub of the 'ETI-L' Sleeve has an 'F' profile seating nipple to land selective or top no-go locking, flow control devices. The lower seal sub has a honed bore that in combination with the upper seating nipple can be utilized to land separation sleeves, chokes or blanking plugs.
- Run in tandem. Any number of 'ETI-L' Sliding Sleeves may be used in tandem. Selective-type locks will pass through as many of the sleeves as the operator chooses and seat in any sleeve he selects.
- Equivalent to and parts interchangeable with Baker Product Number 810-04

AVAILABILITY:

Tubing Size	Sleeve		
	Size	Seal Bore	Max.OD
2-3/8"	1.78	1.781	2.910
	1.81	1.812	
	1.87	1.875
